## SWINE MIXING DIRECTIONS

### MIXED-RATION FEEDING

Use the formulas below to calculate the inclusion level of ClariFly® Premix with grain or a feed supplement based on the target dosage. Use the higher inclusion for lighter weight pigs.

Use the following equation when calculating inclusion level based on a 0.30 mg/kg dosage:

$$\text{Inclusion of ClariFly® Larvicide Livestock Premix 0.67\% (lbs/ton)} = \frac{\text{cwt}}{\text{Average Daily Feed Intake (lbs)}} \times 9$$

Use the following equation when calculating inclusion level based on a 0.20 mg/kg dosage:

$$\text{Inclusion of ClariFly® Larvicide Livestock Premix 0.67\% (lbs/ton)} = \frac{\text{cwt}}{\text{Average Daily Feed Intake (lbs)}} \times 6$$

**THOROUGHLY MIX THIS PRODUCT WITH GRAIN OR A FEED SUPPLEMENT. USE THE HEAVIEST WEIGHT OF A WEIGHT RANGE WHEN CALCULATING.**
