THE TROUBLE WITH FLIES

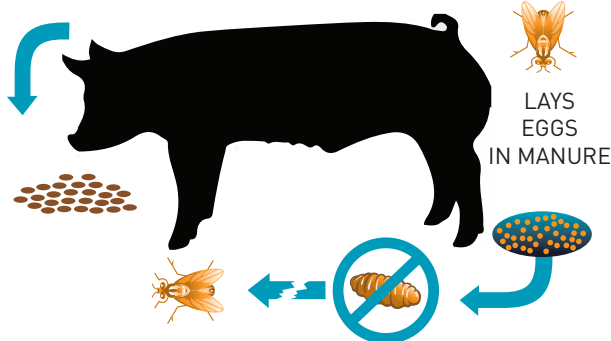

Flies are much more than a nuisance. They are known to spread a number of serious diseases that can directly impact swine health. The presence of swarming, biting flies can put your animals off their feed, preventing them from gaining weight.

GO BEYOND SPRAYS, BAITS AND TRAPS

Unlike conventional fly treatments, ClariFly® Larvicide is a proven feed additive that passes through the animal's digestive system into the manure where nuisance flies lay their eggs. Instead of killing flies through direct toxicity, the active ingredient in ClariFly® Larvicide disrupts the fly's life cycle, preventing manure-breeding flies from developing into biting, breeding adults.

HOW CLARIFLY® LARVICIDE WORKS

CLARIFLY® LARVICIDE
ADDED TO FEED

STOPS GROWTH IN THE LARVAE STAGE,
KEEPING PUPAE FROM MATURING

INTEGRATED PEST MANAGEMENT PRACTICES

Everyone who raises pigs for show—particularly 4H and FFA participants—should understand that fly management programs need to be proactive.

ClariFly® Larvicide is most effective as part of an Integrated Pest Management (IPM) program. Practicing good sanitation, maintaining building repairs and strategically utilizing baits, traps, sprays and foggers such as those in the Starbar® line of products, along with ClariFly® Larvicide, can significantly reduce fly populations. Start ClariFly® Larvicide in your show pigs' feed early in the spring before flies begin to appear. Continue it through the summer and into the fall, until cold weather reduces or ends fly activity.

MAKE CLARIFLY® LARVICIDE PART OF YOUR FLY CONTROL STRATEGY

To help control manure-breeding flies, all swine on the premises need to consume adequate quantities of ClariFly® Larvicide every day. The labeled feeding level for this product is:

- Swine 12-90 pounds, 0.3 mg diflubenzuron/kg of body weight/day
- Swine over 90 pounds, 0.2 mg diflubenzuron/kg of body weight/day

Daily consumption may vary by animal without affecting fly control. ClariFly® Larvicide has no withdrawal period and may be fed up to slaughter.
