

Equine Fly Control **IN BLOCKS AND TUBS**

ClariFly® Larvicide, a feed-through technology, is available in blocks and tubs, and decreases the development of flies in the manure of animals treated with ClariFly® Larvicide by as much as 96.7%* when part of an integrated approach to insect management.

ClariFly® Larvicide has EPA approval for four end-use registrations for use in blocks and tubs for equine.

 **CENTRAL** Life Sciences®
A Leader in Insect Management

Easy, cost-effective management FOR FLY CONTROL

Controls

House flies and stable flies that develop in manure of treated horses

Features

- Interrupts the fly's life cycle rather than eliminating flies through direct toxicity
- Compatibility with Integrated Pest Management (IPM) practices

Benefits

- Increased horse comfort
- Healthier and more productive horses
- Better work environment

Application Timing

Begin using ClariFly® Larvicide in your blocks and tubs early in the spring, 30 days before flies begin to appear. Continue usage throughout the summer and into the fall until 30 days after the first frost.

Consumption

0.15 mg/kg of body weight/day

ACTIVE INGREDIENT CONCENTRATION IN BLOCK/TUB	MG/LB	EQUINE CONSUMPTION PER DAY*
0.08%	363.2	3 OZ.
0.04%	181.6	6 OZ.
0.02%	90.8	12 OZ.
0.01%	45.4	24 OZ.

*Note consumption is based on a 1,000 pound animal. Consumption expected to increase proportionally.
